

TARUN TEJ GAJIBIMKAR

+91-7989149782 | taruntej2525@gmail.com | [Linkedin: Tarun Tej](#) | [Github: tarun7explorer](#) | [Portfolio](#)

SUMMARY

Software Engineer experienced in Python, Java, backend development, Rest APIs, AI automation systems and data-driven applications. Strong foundation in OOPs, SQL, ML, DSA and CI/CD pipelines. Built and deployed production-ready projects improving efficiency and system reliability. Eager to contribute technical skills and fresh perspectives to innovative AI and software development teams.

EDUCATION

Vardhaman College of Engineering, BTech in Electronics and Communication Engineering	CGPA: 8.4/10 (22 - 26)
Narayana Junior College, Intermediate	Percentage: 89
St. Joseph School [ICSE]	Percentage: 86

SKILLS

- **Programming Languages:** Python, Java, SQL, HTML, CSS, JavaScript
- **Frameworks:** Django, Fast APIs, Flask, React, TensorFlow, REST APIs, Microservices
- **Cloud Platforms:** AWS Cloud services (EC2, S3), CI/CD pipelines, GitHub
- **Data Tools & Visualization:** Power Bi, ETL Pipelines, MS Excel, n8n, Zapier

EXPERIENCE

- | | |
|--|------------------------------|
| Finance Analyst Intern, MOM Pharmacy | Aug 2025 – Dec 2025 |
| <ul style="list-style-type: none">• Optimized revenue tracking and operational efficiency by developing automated financial models and KPI dashboards in Excel (Advanced) and SQL, resulting in a 15% reduction in reporting time and identifying key cost-saving measures that lowered operational expenses.• Spearheaded market expansion strategies through comprehensive competitor benchmarking and sales data analysis, delivering actionable insights that helped management identify three new growth opportunities and improve revenue forecasting accuracy. | |
| AI-ML Intern, Edunet Foundation | June 2025 – July 2025 |
| <ul style="list-style-type: none">• Developed and optimized ML models using Python and Scikit-Learn, improving prediction accuracy through rigorous data preprocessing, feature engineering, and hyperparameter tuning.• Collaborated on end-to-end AI solutions, from exploratory data analysis (EDA) to model deployment, delivering actionable insights and automated workflows to solve real-world problems. | |
| Data Analyst Intern, MetaSketch | Oct 2023 - Nov 2024 |
| <ul style="list-style-type: none">• Processed and automated ETL pipelines using Python and SQL to process large-scale datasets, driving actionable business insights through advanced data transformation.• Developed interactive Power BI dashboards to visualize key trends, significantly reducing manual reporting time and enabling data-driven strategic decision-making. | |

PROJECTS

- | |
|---|
| Fake News/Text Detector |
| <ul style="list-style-type: none">• Engineered a fake news detection web app by consolidating 4 diverse datasets into a super knowledge base and implementing a custom knowledge-injection architecture that blended statistical text classification with keyword-level safety logic. Mainly used here LSTM, a deep learning model for training the data.• Developed and deployed a Scikit-Learn pipeline using a Passive Aggressive Classifier and Tfidf Vectorizer, delivering real-time predictions with transparency-focused confidence scores and achieved an accuracy above 95%. Dockerized Flask and ML web application and hosted it on Hugging Space. |
| AI Resume Parser & Skill Matcher |
| <ul style="list-style-type: none">• Designed and deployed an AI-powered resume parser using Python, spaCy and SQL to automate extraction of candidate data from PDF/DOCX files thus improved initial screening efficiency.• Developed an automated skill-matching module that calculates similarity scores between candidate profiles and job descriptions. Accelerated evaluation speed by 15%, enabling faster decisions for the recruitment team. |
| Smart Air Control Monitoring System |
| <ul style="list-style-type: none">• Developed a real-time atmospheric gas monitoring system using an Arduino with MQ-5 sensors to accurately detect smoke, LPG, and natural gas levels. Implemented Wi-Fi-based data transmission to a web server, enabling remote visualization of air-quality metrics through a custom dashboard and alerting mechanism that triggers automatic notifications when gas crosses threshold levels. |

Zip-Line Game

- Developed a logic-based web puzzle game featuring 20 progressive levels, implementing Hamiltonian Path mechanics to enforce sequential grid traversal and simulate complex graph theory concepts in an interactive UI.
- Engineered an intelligent "Smart Hint" system utilizing Depth First Search (DFS) algorithms to dynamically calculate valid paths in real-time, optimizing game logic and enhancing user problem-solving efficiency.

CERTIFICATIONS

- Oracle Certified AI Foundations Associate
- Data Science Boot Camp (Geeks for Geeks)
- Elite + Silver Medal in Python for Data Science (NPTEL from IIT Madras)
- Elite + Silver Medal in Developing Soft Skills and Personality (NPTEL from IIT Kanpur)

VOLUNTEERING

Associate Volunteer, Volunteer For India (VIF)

Aug 2022 - Present

Led a cross-functional team of 12 volunteers coordinating event planning, community outreach, and social impact initiatives across 15+ programs annually. Spearheaded grassroots campaigns addressing local education and healthcare challenges, engaging 50+ community members through workshops and awareness drives.
